

Project Design Phase-I
Proposed Solution Template

Date	17 October 2022
Team ID	PNT2022TMID18806
Project Name	A Novel Method for Handwritten Digit Recognition System
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	A Novel Method for Handwritten Digit Recognition System
2.	Idea / Solution description	The proposed solution is to classify the digits which are in handwritten format by using the CNN model and this model can be trained by using the MNIST database which contains 60,000 training samples and 10,000 test samples.
3.	Novelty / Uniqueness	Image datasets can be classified by CNN, which provides an efficient solution when compared to the other methods.
4.	Social Impact / Customer Satisfaction	Users no need to use external dependencies or devices to recognize the digits, this process can be done through our mobile phones.
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> – Input module – Image processing module Segmentation module – Feature extraction module – Data set training module – Classification module
6.	Scalability of the Solution	The accuracy of the result for the training data set is 99.98% , and 99.40% with 50% noise by using MNIST. Even we can improve this model to achieve better results by training different types of datasets.
